

TANDOM™

Tactical Analytic Decision Optimization Module

TANDOM is a deployed, real-time, tactical toolkit for enhancing actionable decision making. Providing low-SWaP, input-agnostic processing, TANDOM converts the myriad environmental and SA inputs from sensors, video, and environmental feeds and converts them to context-based information streams. Using industry standard I/O protocols, TANDOM can be incorporated into a range of mission spaces including fixed-base monitoring, expeditionary mission execution, and warfighter-level monitoring.

Key Features

- Allow resources to focus on “high confidence” events — **reduce FAR**
- Shorten time to take action — Intelligently combine data to trigger **earlier decision making**
- Improved system sensitivity — **allow detection of events**, that in the past, may have been missed
- Enhanced “**predicting**” of future behavior to support planning and CoA strategies

Tactical Analytic Decision Optimization Module

TECHNICAL SPECIFICATIONS

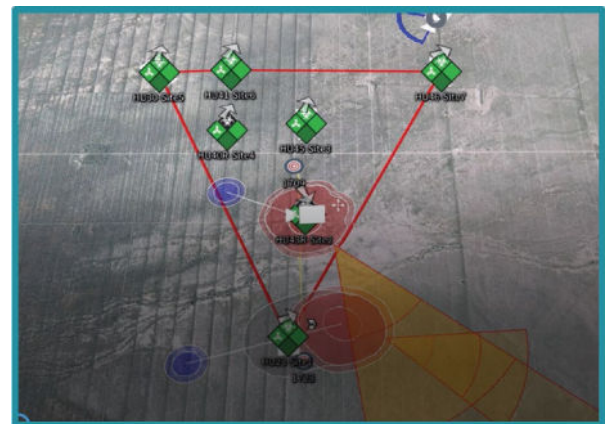

Real-time Tactical Decision Aid (TDA) Support

(Man-in-loop MIL)

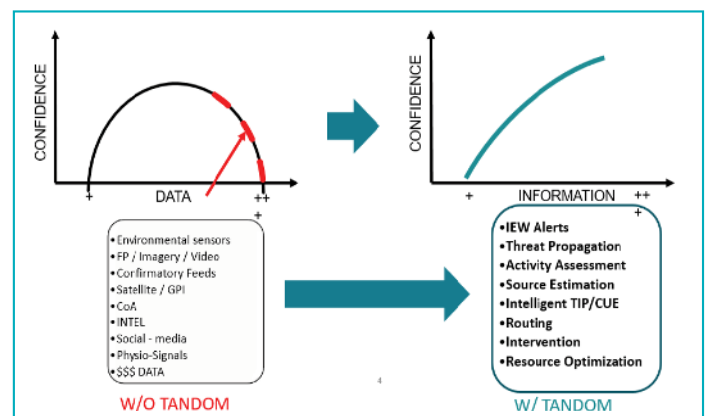

- Fused network-based detection enhancement
 - Sub threshold detection
 - Early detection
- Threat tracking
- Source estimation
- Predictive insight support
- Video detection focusing

Asset Assist/Tip/Cue (MIL/Auto)

- Context-based sensor response
- Intelligent unmanned asset support
- Video /lidar focusing

Real-time multi-threat early detection and estimation

Significantly increased real-time confidence
